<b>Notation</b>	<b>IX</b>
<b>Zusammenfassung</b>	<b>XV</b>
<b>Abstract</b>	<b>XXIII</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Autothermal reactor concepts for endothermic syntheses . . . . .	1
1.2 Motivation and content overview . . . . .	4
<b>2 Autothermal Reverse-Flow Reformer</b>	<b>7</b>
2.1 Methane steam reforming . . . . .	7
2.1.1 Reaction system . . . . .	8
2.2 Energy efficient reactor concepts for MSR - State of the art . . . . .	10
2.3 Reverse-flow reformer . . . . .	12
2.3.1 Fundamentals of the operation principle . . . . .	13
2.3.2 Short cut method for reactor design . . . . .	20
2.3.3 Experimental validation and technical limitations . . . . .	22
2.4 Summary . . . . .	24
<b>3 Flameless combustion for heat supply in a packed bed</b>	<b>25</b>
3.1 Flameless Oxidation (FLOX) and its conventional applications . . . . .	25
3.2 Flameless combustion concept in a packed-bed reactor . . . . .	27
3.3 Suitability analysis and combustion chamber development . . . . .	30
3.3.1 CFD-Simulations . . . . .	31
3.3.2 Tracer Methods . . . . .	34
3.4 Combustion experiments in a single chamber reactor . . . . .	41
3.4.1 Stationary operation . . . . .	41
3.4.2 Ignition and dynamic behaviour . . . . .	48
3.4.3 Understoichiometric combustion . . . . .	57
3.5 Summary . . . . .	61

<b>4 Reheating strategy</b>	<b>63</b>
4.1 Stoichiometric combustion concept . . . . .	63
4.2 Design constraints and combustion chamber operation range . . . . .	65
4.2.1 Operation constraints . . . . .	65
4.2.2 Chamber performance within the design operation range . . . . .	68
4.3 Systematic combustion chamber design based on CFD . . . . .	74
4.3.1 Performance indicators . . . . .	75
4.3.2 Simulation results - Correlation with performance indicators . . . . .	78
4.3.3 Reduced models for the combustion chamber design . . . . .	82
4.4 Summary . . . . .	85
<b>5 Regeneration strategy under reverse-flow operation</b>	<b>87</b>
5.1 Experimental setup . . . . .	87
5.2 Experimental procedure . . . . .	92
5.2.1 Start-up procedure . . . . .	93
5.2.2 Periodic operation . . . . .	93
5.3 Experimental results . . . . .	96
5.3.1 Performance indicators . . . . .	96
5.3.2 RFR behaviour characteristics . . . . .	97
5.3.3 Operability and robustness of operation . . . . .	103
5.4 Summary . . . . .	112
<b>6 Modelling the RFR</b>	<b>113</b>
6.1 Mathematical model . . . . .	113
6.1.1 Packed bed . . . . .	113
6.1.2 Combustion chamber . . . . .	118
6.2 Numerical solution . . . . .	120
6.2.1 Model implementation . . . . .	121
6.2.2 Simulation control . . . . .	122
6.3 Performance indicators . . . . .	123
<b>7 Simulation study</b>	<b>127</b>
7.1 Asymmetric operation . . . . .	127
7.1.1 Convective heat flux disproportion . . . . .	127
7.1.2 Adjustment of operation parameters . . . . .	130

7.2	Alternative reactor configurations for asymmetric operation . . . . .	135
7.3	Symmetric operation . . . . .	141
7.3.1	Simulation results . . . . .	143
7.4	Summary and outlook . . . . .	146
<b>A</b>	<b>Complementary information and experimental parameter sets</b>	<b>151</b>
A.1	Combustion chamber design . . . . .	151
A.1.1	Experimental studies . . . . .	151
A.1.2	Temperature distribution in the chamber . . . . .	153
A.1.3	Simulation studies . . . . .	154
A.1.4	Flow rate variation and effect on the real factor . . . . .	154
A.2	Reverse flow operation . . . . .	157
<b>B</b>	<b>Technical drawings</b>	<b>159</b>
B.1	Elements of the combustion chamber . . . . .	159
B.2	Elements of the single chamber reactors . . . . .	160
B.3	Reverse-flow reformer . . . . .	161
<b>C</b>	<b>Model parameters and physical properties</b>	<b>165</b>
C.1	Model and simulation parameters set . . . . .	165
C.1.1	Geometric dependant parameters . . . . .	165
C.1.2	Physical and thermodynamic data of the bulk phases . . . . .	166
C.1.3	Transport properties . . . . .	168
C.1.4	Simulation parameters set . . . . .	169
C.1.5	Derivation of the combustion chamber control strategy . . . . .	170
<b>D</b>	<b>Parametric studies based on simulation</b>	<b>175</b>
D.1	Asymmetric operation . . . . .	175
D.1.1	Operation parameters . . . . .	175
D.1.2	Structure of the packed bed . . . . .	179
D.2	Symmetric operation . . . . .	181
<b>E</b>	<b>Decentralized hydrogen production facility with RFR</b>	<b>185</b>
E.1	Process description . . . . .	185
E.2	Relevant process parameters . . . . .	188
