Introduction 5

Chapter 1 HISTORY OF BIOSTATISTICS 7

Chapter 2 DESCRIPTIVE STATISTICS
2.1 Random events and random variables 9
2.2 Normal distribution of a random variable 15
2.3 Interval estimates of a random variable 20
2.4 Distribution deviated from normal and its numerical characteristics 27
2.5 Determination of required sample size 31

Chapter 3 FUNDAMENTALS OF THE THEORY OF HYPOTHESES
3.1 Notion of hypothesis. The types of hypotheses. Decision criteria 33
3.2 Hypothesis testing on the equality of mathematical expectations of two normal distributions 37
3.3 Hypothesis testing on the equality of fractions of two binominal distributions 40
3.4 Analysis of variance 42

Chapter 4 DEPENDENCE ANALYSIS
4.1 Correlation analysis 45
4.2 Regression analysis 50
4.3 Multiple correlation and regression 55

Chapter 5 THE APPLICATION OF STATISTICA SOFTWARE PACKAGE FOR QUALITATIVE AND QUANTITATIVE ANALYSES
5.1 Comparison of the groups by quantitative attribute 57
5.1.1 Parametric and non-parametric tests 57
5.1.2 The use of the Student t-test for two independent samples 60
5.1.3 The use of t-test for two dependent samples 64
5.1.4 Comparison of two independent groups with the help of the Mann-Withney u-test 64
5.1.5 The comparison of several ordered groups by binary attributes with the help of the Mann-Whitney test 69
5.1.6 The Wald-Wolfowitz test 69
5.1.7 The comparison of continuous quantities of two related samples with the help of the Wilcoxon w-test 70
5.1.8 One-way anova test 73
5.1.9 Post hoc group comparisons 76
5.1.10 Two-way anova test 81

5.1.11 Differences between several unrelated groups. Nonparametric Kruskal-Wallis h-test 84
5.1.12 Comparison of several dependent groups (repeated measures). The Friedman rank analysis of variance 88
5.2 Comparison of the group by the qualitative attribute 91
5.2.1 Analysis of qualitative attributes with frequency tables and the chi-square test 91
5.2.2 Comparison of one group with the population 93
5.2.3 Comparison of observed and expected frequencies in the two groups using chi-square 95
5.2.4 Construction of a crosstabulation table. Comparison of frequencies in two groups by the Fisher exact test 97
5.2.5 Comparison of frequencies with the crosstabulation table 2 × 2 in two independent samples using the chi-square test 102
5.2.6 Comparison of qualitative features (expressed in frequencies) in two independent samples with the help of the Fisher exact test 104
5.2.7 Comparison of qualitative features (expressed in frequencies) in two related samples with the help of the McNemar test 106
5.2.8 The construction of the confidence interval for the difference of relative frequencies in related samples (before and after treatment) 108
5.2.9 The Kochran q-test for repeated tests 108
5.2.10 Comparison of 2 qualitative features in two independent samples expressed as a percentage (comparison of the relative frequencies within one group and two groups) 110

Chapter 6 THE APPLICATION OF THE STATISTICA SOFTWARE PACKAGE FOR DEPENDENCES ANALYSIS

6.1 Dependence analysis (correlations, associations) 111
6.1.1 The Pearson correlation coefficient 116
6.1.2 The Spearman correlation coefficient 117
6.1.3 The Kendall coefficient of concordance 121
6.2 The methods of regression analysis 123
6.2.1 Multiple linear regression 123
6.2.2 Multiple nonlinear regression 132
6.2.3 Binary logistic regression 135

Chapter 7 THE APPLICATION OF STATISTICA SOFTWARE PACKAGE FOR MULTIVARIANCE ANALYSIS

7.1 Multivariate analysis of variance. 143
7.2 Cluster analysis 151
7.2.1 The classification of the cluster analysis methods according to clustering strategies 151
7.2.2 Joining tree clustering 155
7.2.3 Divisive clustering by k-means method 160

7.3 Factor analysis 163
7.3.1 Basic concepts of factor analysis 163
7.3.2 Principal components method 166
7.3.3 Method of principle factors 172
7.4 Discriminant analysis 176
