Contents

List of Tables **VII**

List of Figures **IX**

Notation **XIII**

1 Introduction **1**
- 1.1 Motivation . . . 1
- 1.2 Scenarios studied in this thesis . . . 4
- 1.3 State-of-the-art technologies . . . 5
  - 1.3.1 Human modeling . . . 5
  - 1.3.2 Robot control . . . 8
  - 1.3.3 Design examples . . . 9
- 1.4 Objectives and Outline . . . 10
- 1.5 Publications . . . 13

2 Human Motion Prediction based on Simple Kinematic Models **15**
- 2.1 Introduction . . . 15
- 2.2 Data set preparation . . . 16
- 2.3 Mathematical formulations . . . 17
  - 2.3.1 Constant acceleration model . . . 17
  - 2.3.2 Minimum jerk model . . . 19
- 2.4 Evaluation and discussion . . . 21
- 2.5 Summary . . . 25

3 Data-driven Approaches for Human Motion Prediction **27**
- 3.1 Introduction . . . 27
- 3.2 Inverse optimal control . . . 28
  - 3.2.1 Problem formulation . . . 28
  - 3.2.2 Solution based on the principle of maximum entropy . . . 29
  - 3.2.3 Implementation . . . 31
  - 3.2.4 Evaluation and discussion . . . 33

3.3 Gaussian Process Regression . . . 35
3.3.1 Regular form . . . 35
3.3.2 Sparse Gaussian process . . . 37
3.3.3 Online Sparse Gaussian process . . . 38
3.3.4 Evaluation and discussion . . . 39
3.3.5 Gaussian process with explicit basis functions . . . 45
3.4 Summary . . . 48

4 Human Motion Prediction based on Dynamic Movement Primitives 51
4.1 Introduction . . . 51
4.1.1 Hybrid physical and data-driven approach . . . 51
4.1.2 Modeling of interaction dynamics . . . 54
4.2 Regular DMP . . . 56
4.3 Modified DMP . . . 57
4.3.1 DMP with Gaussian process . . . 57
4.3.2 Rotation based spatial scaling . . . 58
4.3.3 Weighting factor . . . 59
4.4 Learning a DMP model . . . 61
4.4.1 Standard approach . . . 61
4.4.2 Two-step approach . . . 62
4.5 Evaluation and discussion . . . 65
4.6 Coupled DMP for modeling interaction dynamics . . . 68
4.7 Summary . . . 71

5 Discussion on Human Motion Prediction for Human-Robot Collaboration 73
5.1 Comparison of different approaches in human motion prediction . . . 73
5.1.1 Boundary conditions . . . 73
5.1.2 Prediction accuracy at different time scales . . . 74
5.1.3 Implementation complexity and scope of application . . . 79
5.2 Potential research trends . . . 81
5.2.1 From single-predictor to multiple-predictor . . . 81
5.2.2 From simple motions to complex skills . . . 83
5.2.3 From individual to collaborative behaviors . . . 84

6 Physical Human-Robot Collaboration and Impedance Control 85
6.1 Introduction . . . 85
6.2 Impedance control . . . 86
6.2.1 Classification of robot interaction control . . . 86
6.2.2 Joint impedance control . . . 88
6.2.3 Cartesian impedance control . . . 90

6.3 Analysis of physical human-robot collaboration . . . 93
6.3.1 System model . . . 93
6.3.2 Problem formulation . . . 98
6.4 Summary . . . 100

7 Adaptive Impedance Control based on Reinforcement Learning 103
7.1 Introduction . . . 103
7.2 Basics of reinforcement learning . . . 104
7.3 Q-Learning-based adaptive impedance control . . . 108
7.3.1 Unconstrained Learning . . . 108
7.3.2 Learning with consideration of constraints . . . 116
7.3.3 Impedance and role assignment . . . 119
7.4 Summary . . . 120

8 An Adaptive Learning and Control Framework in Human-Robot Collaboration 121
8.1 Introduction . . . 121
8.2 Experimental study: handovers . . . 122
8.2.1 Hardware . . . 123
8.2.2 Pre-alignment . . . 124
8.2.3 Design based on Gaussian Process . . . 125
8.2.4 Design based on Dynamic Movement Primitives . . . 130
8.3 Experimental study: object handling . . . 139
8.3.1 Validation of the Q-learning based adaptive impedance control . . . 140
8.3.2 Human reference estimation . . . 142
8.3.3 Evaluation of the whole framework . . . 144
8.4 Summary . . . 150

9 Conclusion and Outlook 153
9.1 Conclusion . . . 153
9.2 Outlook . . . 156

Appendices 159

A Inverse Optimal Control with Local Optimality 161

Bibliography 163

Zusammenfassung 179

Supervised theses 185

Curriculum Vitae **187**
