

Contents

1	Introduction	1
1.1	Motivation	4
1.2	Contribution	10
1.3	Overview	14
2	Related Sensor Technologies and Machine Learning Methods	17
2.1	Sensors in Gait Analysis	18
2.1.1	Camera Sensors	19
2.1.2	Inertial Measurement Sensors	20
2.1.3	Floor Sensors	22
2.2	SensFloor: A Capacitive Floor Sensor	25
2.2.1	Sensor Modules	26
2.2.2	Transceiver	32
2.2.3	Applications	33
2.3	Machine Learning for Sensor Data Analysis	36
2.3.1	Artificial Neural Networks	38
2.3.2	Multi-Layer Perceptron	39
2.3.3	Long Short-Term Memory	47
2.3.4	Density-Based Spatial Clustering of Applications with Noise	54
2.3.5	Evaluation of Machine Learning Models	56
3	Floor Sensor Data Analysis	61
3.1	Analysis Framework	61
3.1.1	Floor Sensor Characteristics	62
3.1.2	Measurement Event Messages	64
3.1.3	Sensor Geometry Map	68
3.1.4	Floor Sensor State	70
3.1.5	Point Cloud State	75

3.2	Gait Analysis	76
3.2.1	Visualisation of Maximum Activations	78
3.2.2	Tracking Persons	79
3.2.3	Gait Parameters	82
3.2.4	Feature Extraction for Gait Representation	91
3.2.5	Machine Learning using Handcrafted Features	94
3.2.6	Local Receptive Field for Gait Representation	95
3.2.7	Feature Learning	100
4	Experiments and Results	103
4.1	Recognising People with High Risk of Falling	104
4.1.1	Senior Residence Data Set	105
4.1.2	Analysis Method	107
4.1.3	Results	109
4.1.4	Discussion	110
4.2	Estimating the Age of a Person	114
4.2.1	Age Data Set	115
4.2.2	Analysis Method	117
4.2.3	Results	118
4.2.4	Discussion	118
4.3	Detecting Walking Challenges	122
4.3.1	Interventions Data Set	123
4.3.2	Analysis Method	126
4.3.3	Results	127
4.3.4	Discussion	129
5	Conclusion	133
5.1	Scientific Findings	133
5.2	Limitations	136
5.3	Future Work	138
5.4	Theoretical and Practical Implications	141
A	Description of Data Formats	143
B	Mathematical Notation and Symbols	149

C Abbreviations	153
List of Figures	155
List of Tables	157
Author's Publications	159
Bibliography	161
