**Abstract** iii

**Acknowledgements** v

**List of Figures** xi

**List of Tables** xv

**Glossary** xvii

**List of Symbols** xix

**1 Introduction** 1
- 1.1 Purpose of the Work . . . 2
- 1.2 Thesis Outline . . . 2
- 1.3 Contributions . . . 4
- 1.4 List of Publications . . . 6

**2 Theoretical Background** 9
- 2.1 Biological Cells . . . 11
  - 2.1.1 The Eukaryotic Cell . . . 11
  - 2.1.2 Cellular Membrane . . . 14
- 2.2 Electrical Properties of Biological Systems . . . 15
- 2.3 Electrical Impedance Spectroscopy . . . 19
  - 2.3.1 Mathematical Concept of Impedance . . . 19
  - 2.3.2 Graphical Representation of Impedance Data . . . 21
  - 2.3.3 Electrical and Electrochemical Circuit Elements . . . 22
  - 2.3.4 Conditions for Valid EIS Data . . . 25

**3 Development of a Four Electrode Terminal Chamber System** **27**
3.1 Electrode Polarization in Low Frequencies . . . . . 28
3.1.1 Interfacial Capacitance . . . . . 28
3.1.2 Charge Transfer Resistance . . . . . 31
3.1.3 Warburg Impedance for Diffusion Modelling . . . . . 32
3.1.4 Solution Resistance . . . . . 32
3.1.5 Equivalent Circuit of Electrode-Electrolyte Interface . . . . . 33
3.2 Measurement Systems and Electrodes Setup . . . . . 34
3.2.1 Two-Electrode Measurement System . . . . . 36
3.2.2 Three-Terminal Measurement System . . . . . 37
3.2.3 Four-Terminal Measurement System . . . . . 38
3.3 Detailed ECM of the Experimental Setup . . . . . 39
3.4 Designed System . . . . . 41
3.5 Comparison 4T vs. 2T Measurements . . . . . 44
3.6 Source of Artifacts in Low Frequency Impedance Experiments . . . . . 46

**4 Applying EIS to Cancer Cells Suspensions** **47**
4.1 Introduction . . . . . 47
4.1.1 Normal Cell Lines . . . . . 49
4.1.2 Prostate Cancer Cell Lines . . . . . 50
4.1.3 Leukemia Cell Lines . . . . . 51
4.1.4 Colon Cancer Cell Lines . . . . . 53
4.1.5 Breast Cancer Cell Lines . . . . . 54
4.2 Experimental Procedure . . . . . 55
4.3 Experimental Results . . . . . 56
4.3.1 Impedance Magnitude and Phase Curves Using the 320 $\mu L$ Chamber . . . . . 56
4.3.2 Metastatic versus Non-Metastatic Cancers . . . . . 62
4.3.3 Comparison of the Impedance Spectrum from Different Cell Lines 67
4.3.4 Cell Sizes . . . . . 69
4.4 Suggestions for Future Experiments . . . . . 70
4.4.1 Use a Temperature Controlled Box . . . . . 70
4.4.2 Measure Cells Shortly After Detachment . . . . . 71
4.4.3 Perform Only Few Experiments per Day . . . . . 72
4.4.4 Use Preferably New Electrodes . . . . . 72
4.4.5 Use Small Voltage Signals . . . . . 73
4.4.6 Do not apply a DC potential to impedance experiments . . . . . 73
4.5 Conclusions . . . . . 74

**5 Measuring the Cell Surface Charge** **75**
5.1 Introduction . . . 75
5.2 Low Frequency Dispersion of Colloidal Particles Suspended in Electrolyte Solutions . . . 76
5.3 Dimensional Analysis of Equation 5.7 . . . 81
5.4 Correction of Schwarz Model to 4T Experiments . . . 82
5.5 Experimental Results: Calculation of the Cell Surface Charge . . . 85
5.6 Comments on Schwarz Theory . . . 88
5.7 Conclusions . . . 89

**6 Measuring Adherent Cells** **91**
6.1 Introduction . . . 91
6.2 Theoretical Background . . . 92
6.2.1 Working Principle . . . 93
6.2.2 Presence of the Double Layer . . . 94
6.2.3 Equivalent Circuit Model to Analyse the Cells Attached to Interdigitated Electrodes . . . 94
6.3 Experimental Procedure . . . 97
6.4 Experimental Results . . . 100
6.4.1 Cell Attachment and Growth . . . 100
6.4.2 Evaluating Chemotheraphy Effects . . . 101
6.5 Conclusions . . . 104

**7 Spectral Response of Healthy Tissues and Solid Tumors** **107**
7.1 Theoretical Background . . . 107
7.2 Spectral Response of Healthy Tissues . . . 109
7.3 Tumor Composition and Organization . . . 112
7.4 Main Structural Differences Between Tumor and Healthy Tissues . . . 114
7.5 Comparison Tumor vs. Healthy Tissues Spectral Response . . . 117
7.5.1 Experimental Setup . . . 117
7.5.2 Experimental Results . . . 118
7.6 Conclusions . . . 123

**8 Conclusions and Future Work** **135**
8.1 Summary and Conclusions . . . 135
8.2 Recommendations and Guidelines . . . 137
8.3 Future Work . . . 138

**A Architecture proposal of a 4T impedance measurement system** **141**
A.1 Macro view of the impedance measurement system . . . . . 142
A.1.1 Oscillator . . . . . 142
A.1.2 Potentiostat . . . . . 143
A.1.3 Principles of lock-in detection . . . . . 145
A.1.4 Front-end and complete system . . . . . 147
A.2 Conclusions . . . . . 147

**B Cancer metabolites identification** **153**
B.1 First method: membrane system to separate different types of ions . . . . 153
B.1.1 Step A: identify body fluids . . . . . 154
B.1.2 Step B: choose one body fluid . . . . . 154
B.1.3 Step C: identify metabolite chemical formula . . . . . 154
B.1.4 Step E: calculate the molecular size of the metabolite . . . . . 155
B.1.5 Design membrane system to separate metabolite . . . . . 158
B.1.6 Conductivity measurement of different compartments . . . . . 160
B.1.7 Calculate metabolite concentration . . . . . 162
B.1.8 Comments about the method . . . . . 163
B.2 Second method: surface modified interdigitated electrodes . . . . . 163

**C Extracting $\Delta\varepsilon_\alpha$ from impedance measurements** **165**
C.1 Equivalent circuit model . . . . . 166
C.2 Fitting the experimental data . . . . . 167
C.3 Extracting $\Delta\varepsilon_\alpha$ . . . . . 168
C.4 Example of fitting PC-3 cells experiments to extract $\Delta\varepsilon_0$ . . . . . 169

**Complete Table Cell Surface Charge** **173**

**Bibliography** **175**
