

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Analysis of an Abstract Semilinear DAE</b>	<b>5</b>
2.1	Matrix-induced Linear Operators . . . . .	9
2.2	Solution Spaces for Semilinear Abstract DAEs . . . . .	13
2.3	Dissection-based Decoupling Procedure . . . . .	19
2.4	Existence Theory . . . . .	26
2.5	Summary and Discussion . . . . .	36
<b>3</b>	<b>A Brief Introduction to Linear Wave Equations</b>	<b>41</b>
3.1	Linear Hyperbolic Partial Differential Equations of Second Order . . . . .	43
3.2	Linear Wave Equations . . . . .	47
3.3	Sample Applications . . . . .	50
3.4	Summary . . . . .	52
<b>4</b>	<b>Analysis of a Coupled System</b>	<b>53</b>
4.1	Solution Spaces for the Coupled System . . . . .	55
4.2	Analysis of a Coupled System of Abstract ODE and Semilinear Wave Equation . . . . .	58
4.3	Analysis of a Coupled System of Abstract DAE and Semilinear Wave Equation . . . . .	75
4.4	Summary and Discussion . . . . .	81
<b>5</b>	<b>A First Small Step Towards Optimal Control</b>	<b>85</b>
5.1	Problem Formulation . . . . .	86
5.2	Existence of a Global Minimizer . . . . .	88
5.3	Summary and Discussion . . . . .	91
<b>6</b>	<b>Conclusion and Outlook</b>	<b>93</b>
	<b>Appendix</b>	<b>95</b>
<b>A</b>	<b>Generalized Inverses, Projections and Factorizations of Matrices</b>	<b>97</b>
<b>B</b>	<b>Tools from Functional Analysis</b>	<b>103</b>
B.1	Facts from Functional Analysis . . . . .	104

B.2	On Sobolev Spaces . . . . .	106
B.3	On Bochner Spaces . . . . .	108
<b>C</b>	<b>On Abstract Differential Equations and Operator Equations</b>	<b>117</b>
C.1	Tools from Abstract ODE Theory . . . . .	117
C.2	Nemytskii Operators on Bochner Spaces . . . . .	119
C.3	On Monotone Operators . . . . .	120
	<b>Bibliography</b>	<b>123</b>
