

Contents

	List of Figures	vii
	List of Tables	ix
1	Foreword	1
1.1	Motivation	1
2	Theory and Measurement of Learning and Knowledge	5
2.1	Models of Learning and Knowledge	7
2.2	Conceptual Change	18
2.3	A Summary of Alternative Conceptions on the Subject of Circuit Electricity	31
2.4	Measuring Alternative Conceptions and Learning Gains	49
3	Verifying Testing Materials	63
3.1	Test Validation	65
3.2	Examining Student Conceptions in a Cognitive Laboratory Interview	68
3.3	Statistical Methods for Questionnaire Analysis	117
4	Constructing Materials for Learning	139
4.1	Study Background	141
4.2	Theories Informing Instructional Design	149
4.3	Adapting Existing Materials	154
4.4	Collaborative Task Design and the Affordances of Digital Teaching	173
4.5	Design of the “Talking Circuits” Application	178
4.6	Research Questions and Study Design	186
5	Results of the Quasi-Experimental Study	191
5.1	Data Collection and Preparation	193
5.2	Effect of the Intervention on Attainment	194
5.3	Effect of the Intervention on Motivation	198

5.4	Effects for the Same Teacher	206
5.5	Effects by Alternative Conception	208
5.6	Conclusions and Suggestions for Future Research	210
6	Summaries	215
6.1	Research Summary	217
6.2	Teacher Summary	228
A	Testing Materials	233
A.1	Testing Materials used in Cognitive Laboratory Interview	233
A.2	Redeveloped Tests Used in the Intervention	252
A.3	Table Showing Codes in New and Redeveloped Tests	264
B	Vocabulary List	265
B.1	List of Possibly Unknown Words used in “An Introduction to Electric Circuits”	265
C	Questions Featured in “Talking Circuits”	269
C.1	Table Showing Questions in Each Tablet Lesson	269
D	Additional Figures and Tables	277
D.1	Inter-item Correlations	277
	Bibliography	279
